Forbes Marshall Arca Roboter Prv

For accurate control of pressure for liquids, steam and gas without the need for an instrument loop

Some Typical Applications

Industrial and municipal power stations
Reducing or overflow control applications in steam and condensate circuits
Overflow controller for fuel oil and pressure controller for atomizing steam
Steel mills as overflow controller for lubricating oil and cooling water system
Rolling mill stands as a controller for bearing pressure
Similar applications can be found in the automobile industry, oil & gas, chemical and fertilizer, etc…
