IJ-FMPRV
Insulation Jacket For FMPRV41, DSPRV41, FMPRV53

Description
Forbes Marshall Insulation Jackets are used for preventing heat energy loss from the body of the pressure reducing valve in service. The insulation jackets for the pressure reducing valve are available in ready to mount condition.

Limiting Conditions
Maximum metal surface temperature : 220°C

How to Order
Example: 1 No. Insulation jacket for DN 15 FMPRV41

Installation
Once the pressure reducing valve is installed, the insulation jacket can be fixed as follows.

a) Place the jacket centrally from the bottom side of the pressure reducing valve.
b) Slide the jacket up over the flanged/threaded connection and pull the velcro flaps in to secure position.
c) Wrap front and back of jacket around the valve and secure fully by using the side velcro flaps. Finally pull and tie the draw cords to minimise any gap that would allow air to flow or allow ingress of water.

Removal
Before removing the jacket, check if the pressure reducing valve is in service. If it is, then metal surface will be hot enough to burn, so suitable protective clothing (gloves, apron etc.) should be worn. Removal is the reverse of the installation procedure given above.

Handling
When the jacket is new the insulation material is fully enclosed within the inner and outer face and retained by stitching. In this condition no special protective clothing is required. However, if the inner and outer face becomes unstitched or damaged, so as to expose the insulation material then suitable protective clothing (e.g. gloves, safety glasses, face masks and overalls) should be worn when handling.

Disposal
This product is not recyclable and is non-combustible. For disposal purpose consider the product to be mineral fibre and dispose off in accordance with local regulations.
