## How to Order

Example: 1/2" Piston Valve with socket weld ends.

## Installation

The valve is designed for installation in a vertical or horizontal line with inlet as per the arrow direction. To open the valve turn hand wheel till it stops at the top and to close, turn hand wheel till it touches the bonnet. Do not use "F" key. If any leakage is observed during operation at the outlet, close valve fully and tighten opposite nuts equally half or one turn until leakage stops.

**Ensure that water hammer is not present in the lines under any circumstances. This can be done by gradually charging the line and draining all the residual condensate through drain valves every time the line is charged with steam. Heavy water hammer may permanently damage the piston valve.**

## Safety Information

**Pressure :** Before attempting any maintenance of the valve, ensure that pressure is isolated and safely vented to atmosphere. Do not assume that the system is depressurized even when a pressure gauge indicates zero.

## Maintenance

Use Molykote M30 oil for lubrication. For 1/2"-1 1/2" sizes lubricate spindle regularly through bonnet hole and spindle threads.

**Operate the valve once or twice after lubrication.**

## Piston Valve Operating Guidelines

1. Flush the line properly before taking the Piston Valve in operation

2. Do not use valve "F" key for opening & closing the valve

3. Please do oiling of valve as shown in below figure with Molykote M30 oil or high temperature lubricating oil to ensure smooth operation of valve

## Available Spares

Refer Piston Valve user manual for available spares.

## How to Order Spares

Order spares as per the code no. specified in the user manual.
